Idriss Kone

Software Developer / Full Stack
Montreal, QC • idriss.kone@icloud.com • GitHub • LinkedIn

Summary

Software developer with 5+ years building web applications in TypeScript and React. At Plusgrade, runs experimentation on partner products end to end and builds AI powered tooling, including a production support plugin his team relies on. Independently built and deployed an AI powered video tool. Previously at Sheertex, building Remix and Shopify storefronts.

Experience

Software Developer, Plusgrade - Montreal, QC — Mar 2025 - present

- Led partner storefront experimentation end to end, running tests and reporting results before launch; winning tests lifted conversion 15% to 25% and grew average transaction size.
- Shortened support investigations by building an AI powered production support plugin that pulled context from several systems into one place, replacing manual lookups.
- Built an AI skill for pull request review that the team adopted, raising release confidence; team velocity increased as the team adopted AI end to end.
- Led a partner product launch from ideation to delivery: wrote the solution document, ran story mapping into epics, stories, and tickets with clear dependencies; the team shipped about two months early.
- Shipped production storefront features in TypeScript, React, and Salesforce Commerce Cloud, cutting silent failures and making later releases safer.
- Reduced production incidents by owning incident follow up and tracing each storefront failure to its root cause, so the same failures stopped recurring.
- Owned application initialization and rewrote its startup logic into smaller, clearer steps, making the code easier to read and new features safer to add.

Web Developer, Sheertex - Montreal, QC — Sept 2023 - Mar 2025

- Shipped self serve customer accounts on the Shopify Customer API, letting shoppers manage account details without going through support.
- Cut freelancer turnaround 30% across multiple sites by writing clear briefs up front and reviewing the work before it shipped.
- Raised store visits 30% by building a store locator that paired a map service with daily inventory scraping, showing shoppers which nearby stores had stock.
- Migrated the storefront from a client rendered React app to Remix, moving rendering to the server so pages arrived with content already in the HTML.
- Shipped a wishlist and back in stock email flow on the customer REST API, notifying shoppers automatically when a saved item returned to stock.

Junior Web Developer, Sheertex - Montreal, QC — Feb 2022 - Sept 2023

- Raised revenue 10% by shipping a Quick Add flow in React on Shopify's Storefront API, letting shoppers add items to cart without leaving the collection page.
- Lifted storefront conversion 15% by running A/B tests and shipping only the variants that won.

Skills

Languages: TypeScript, JavaScript, HTML, CSS, GraphQL

Frameworks: React, Remix, Next.js, Node, Salesforce Commerce Cloud, Shopify Liquid

Tools: PostHog, Splunk, FullStory, Cypress, Git, GitLab

AI: LLM powered applications, GenAI tooling

Spoken: English (native), French (fluent)

Education

Concordia University, BCompSc in Computer Science — Sept 2016 - Jan 2019
